

Sustainability and Climate Change Policy Statement

Recycling Group 2019 Limited (RGL) is driven by corporate governance and recognition of the impact that society has on sustainability. Recycling Group is committed to developing the recycling industry in New Zealand to better engage with the goal of sustainable development. We strive for continual improvement through our focus on various aspects of the recycling chain and providing a closed loop focus service, guided by ISO 14001 and 9001 to ensure that a high standard is upheld. Sustainability for RGL is built around the health and well-being of staff, stakeholders, business, and the environment.

Recycling Group:

Strives to exceed the expectations of environmental legislation and best practice that have been put forward by regulators to better develop the recycling and waste management practices in New Zealand and beyond.

Creating connections, sharing knowledge, and constantly improving through different scales-internally and externally, nationally, and globally to enhance the quality of the service, the processes facilitated and overall well-being.

Monitoring, measuring, analysing, and evaluating are staples that have integrated throughout RGL's systems to understand the environmental impact and facilitate the constant improvement and development of RGL's sustainability practices.

Creating an environment that understands and plans for the long-term nature of sustainability through economic development, social progress, environmental projects and employee satisfaction and engagement.

Recycling Group has acknowledged and determined that Climate Change is a relevant issue to our operations.

Recycling Group acknowledges that interested parties can have requirements concerning climate change. We will endeavor to work with any stakeholders to meet these requirements.

Strive for engagement with other sustainably minded businesses and integrate them into our processes to engage in a close loop focus and facilitate responsible consumption and production.

The reduction of carbon emissions through developing robust closed loop recycling chains and understanding of the environmental impact by reducing waste to landfill. Contributing to the processes and infrastructure to develop a low-carbon economy.

Engage with stakeholders, developing their understanding and perception on sustainability into business processes and company policy. Developing strategic plans utilizing risk management with stakeholders to create more developed sustainable practices.

Facilitate Product Stewardship Schemes as one of the New Zealand's leading strategies to help reduce the impacts of manufactured products on our environment. By providing this pathway it enables a more efficient and effective streamline of reducing the environmental impact.

Wayne Grieve (General Manager)
